AMEN APPLICATION RESEARCH

Co-Design Session

Layout, Prompts & Facilitator Guide

OVERVIEW

Activity 1: Channel Ranking *(5 min)*
Activity 2: Content Layout Card Sort *(10 min)*
Activity 3: Build Your Own Screen *(15 min)*
Activity 4: Feature Placement (App vs social media) *(15 min)*
Activity 5: Community & Sharing Map *(15 min)*

Total estimated time: 60 minutes

GENERAL FACILITATOR NOTES

- This session is conducted in both Sepedi and English. The facilitator reads all prompts aloud.
- All activities use physical materials: cards, paper, pens, and stickers. No screens are required during the co-design session.
- There are no right or wrong answers. The facilitator must not suggest, correct, or guide participant responses.
- Record all participant responses to be made into transcripts. Photograph all physical artefacts produced before the session ends.

The session follows the usability evaluation and Likert scale completion. Participants have already interacted with the app, YouTube, and TikTok before this session begins.

Activity 1: Channel Ranking

⏱ **5 minutes**

Participants physically place three channel cards in order of preference — from most to least useful for receiving pregnancy health information. This establishes an overall platform preference before moving into the design activities.

SAY TO PARTICIPANT:

“Mo ke dikarata tše tharo: e nngwe ke ya app, e nngwe ke ya YouTube, gomme e nngwe ke ya TikTok. Di bee ka tatelano go tloga go yeo o ka e dirišago kudu go hwetša tshedimošo ka ga boimana go fihla go yeo o ka e dirišago gannyane. Hle hlalosa gore ke ka baka la eng o di beile ka tsela yeo.”

"Here are three cards: one for the app, one for YouTube, and one for TikTok. Place them in order from the one you would use the most to the one you would use the least to get pregnancy health information. Tell me why you put them in that order."

FOLLOW-UP PROBES:

- *Ke eng se se dirilego gore o bee ye godimo?*
- *Na go na le sengwe ka yeo o e beilego mafelelong seo o sa se ratego goba o sa se tshepego?*

- *What made you put that one first?*
- *Is there anything about the one you put last that you do not like or do not trust?*

Activity 2: Content Layout Card Sort

⏱ **10 minutes**

Participants rank three different ways health content could be organised and presented. This informs whether the app should use a folder-style module structure, a search or conversational interface, or a TikTok-style scrolling feed.

SAY TO PARTICIPANT:

“Mo ke ditsela tše tharo tšeo tshedimošo ya maphelo e ka bontšhwago ka tšona mogaleng. Di bee ka tatelano go tloga go yeo e bonagalago e le bonolo kudu go e diriša go fihla go yeo e bonagalago e le boima kudu. O ka di šuthiša ka makga a mantši kamoo o ratago. Ge e ba o na le kgopolo ya gago yeo e sego mo dikarateng tše, e thale lefelong leo le filwego.”

"Here are three ways health information could be shown to you on a phone. Place them in order from the one that feels the easiest to use to the one that feels the hardest. You can move them around as many times as you like. If you have your own idea that is not on any of these cards, draw it in the blank space."

FOLLOW-UP PROBES (only if needed):

- *O rata eng ka yeo o e kgethilego pele?*
- *Na go na le sengwe seo se hlaelago go tše tharo tše?*
- *Ke efe yeo e swanago kudu le selo seo o šetšego o se diriša mogaleng wa gago?*

- *What do you like about the one you chose first?*
- *Is there anything missing from all three that you would want?*
- *Which one feels most like something you already use on your phone?*

Activity 3: Build Your Own Screen

⏱ **15 minutes**

Participants use pre-cut icon cards, stickers, and a pen to design what they want to see when they open a health app. No scenario is given — participants decide what screen to design. This is the primary generative design activity and produces the richest UI redesign data.

SAY TO PARTICIPANT:

"Se ke sekirini sa mogala wa gago. Diriša dikarata tše goba o thale tša gago go aga seo o ka ratago go se bona ge o bula app ya maphelo. Ga go na melao — re bontšhe fela seo se kwagalago go wena. O ka kgomaretša dikarata, wa thala, wa ngwala goba wa dira tšohle mmogo."

"This is your phone screen. Use these cards or draw your own to build what you would want to see when you open the health app. There are no rules: just show us what makes sense to you. You can stick the cards down, draw, write, or do all together."

FOLLOW-UP PROBES:

- *Na o ka re hlalosetša seo o se hlamilego? Karolo ye nngwe le ye nngwe e dira eng?*
- *Na go na le sengwe seo o bego o nyaka go se oketša eupša se be se se gona?*
- *Ke karolo efe yeo e lego bohlokwa kudu sekirineng seo o se hlamilego?*

- *Can you walk me through what you have built, what does each part do?*
- *Is there anything you wanted to add that was not in the cards and you didn't draw?*
- *What is the most important thing on the screen you made?*

Activity 4: Feature Placement… App vs social media ⏱ 10 minutes

Participants sort feature cards into two zones — inside the app or on social media. A third option of both is available. This directly answers the sub-question of whether social media features should be integrated into the app or left on their native platforms.

SAY TO PARTICIPANT:

"Mo go na le dikarata tše di bontšhago dilo tše di fapanego tšeo mothopo wa tshedimošo ya maphelo o ka go thušago ka tšona. Karata ye nngwe le ye nngwe e bee moo o naganago gore e swanetše go ba gona — ka gare ga app, mo ditabeng tša leago tša go swana le YouTube goba TikTok, goba gare ge e ba o nyaka gore e be mafelong ka bobedi. Re botše gore ke ka lebaka la eng o e beile moo."

"Here are cards showing different things a health channel could do for you. For each card, place it where you think it belongs — inside the app, on social media like YouTube or TikTok, or in the middle if you want it in both places. Discuss why you put each one where you did."

FOLLOW-UP PROBES:

- *Ke ka lebaka la eng o e beile mo ditabeng tša leago go e na le ka gare ga app?*
- *Na go na le sengwe seo app e ka se dirago bokaone go feta ditaba tša leago?*
- *Na go na le sengwe seo ditaba tša leago di ka se dirago bokaone go feta app?*

- *Why did you put that one on social media rather than in the app?*
- *Is there anything here that the app could do better than social media?*
- *Is there anything here that social media could do better than the app?*

Activity 5 — Community & Sharing Map

⏱ **10 minutes**

Participants use a blank sheet with a phone drawn in the centre to map how connected they want the health information to be to the people around them. This is intentionally open — participants may draw arrows outward to family and community, draw walls keeping it private, or something entirely different. All responses are valid data.

MATERIALS NEEDED:

- A3 blank sheet with a simple drawing of a phone in the centre — one per participant
- Pens, pencils, and coloured markers
- Small sticker dots or sticky notes participants can use to represent people or connections
- Camera or phone to photograph completed maps before the session ends

SAY TO PARTICIPANT:

“Mogala wo o lego gare o na le app ya gago ya maphelo. Thala goba ngwala gore ke mang yo mongwe yo o ka ratago go mo kgokaganya le tshedimošo ye: lapa, bagwera, kliniki, setšhaba sa gago goba motho le ge e le ofe. Re bontšhe gore o nyaka e kgokagane gakaakang goba e be sephiri gakaakang. Ga go na karabo ya maleba goba ye mpe.”

"This phone in the middle has your health app on it. Draw or write who else you would want to connect to this information: family, friends, the clinic, your community, or anyone else. Show us how connected or private you want it to be. There is no right answer."

FOLLOW-UP PROBES (only if needed — do not prompt):

- *Na o ka re hlalošetša seo o se thadilego — batho goba mafelo ao o a kgokagantšego le sona ke afe?*
- *Na go na le motho yo o ka se ratego go abelana le yena tshedimošo ye?*
- *Na o ka rata go bona seo basadi ba bangwe ba baimana motseng wa geno ba se balago goba ba se dirago?*
- *Na o ka rata gore app e kgokaganywe le YouTube gore o kgone go abelana dilo gabonolo?*

- *Can you discuss what you drew: who are the people or places you connected it to?*
- *Is there anyone you would not want to share this information with?*
- *Would you want to see what other pregnant women in your community are reading or doing?*
- *Would you want the app to connect to YouTube so you could share things easily?*
